

UniSlot™

Wallmount Installation Guide

Recommended batten sizing:
Approx. 68 x 19mm

Tip 1

For an uneven floor, find the highest point using a spirit level (A). Use this point for measuring the mounting location of the first batten (B). Mount all posts level, then unwind the glides until they are touching the floor.

Tip 2

If mounted correctly, the internal space between the posts will be 31mm smaller than the bay width. For a 900mm bay, the internal measurement (side face to side face, should be 869mm.

Tip 3

If you are installing back panels, check that you can attach shelves and crossbars over the panels without interference, before assembling your entire UniSlot™ display.

For further advice on installing your UniSlot™ display, call **1800 111 488** or email sales@apexdisplay.com.au
